An industry leading digital testing framework to evaluate application capability in establishing and maintaining geospatial integrity and data quality

Ensure your geospatial implementation is:

- COMPLETE
- CORRECT
- CONSISTENT
- VERIFIABLE

GIGS has provided industry good practice on geospatial integrity for over a decade. The current version is undergoing significant revision, releasing early 2021:

- Simplified framework with targeted, flexible tests and reduced complexity
- New online testing platform closely integrated with EPSG Dataset
- Enhanced scoring system and easier identification of improvement actions
- Modernised test dataset including new industry data exchange formats
- Consolidated and concise guidance, with easier access to help and advice
